

Engineering Technologies Diploma

16-19

Adult

Falmouth Marine School has been introducing students to the marine industry since 1920. Our current students study a range of courses including boat handling, construction, and system maintenance right through to highly academic courses such as marine science.

Our Engineering diploma sits neatly between Marine Technical Certificates and Higher Education, making it a great option for those who aspire to work within a more senior engineering role.

This course will allow you to develop the key skills and knowledge that an owner of a marine business would expect from their members of staff. Employees who can solve problems and develop new solutions are essential for any business to grow, this course will enable you to develop these skills and more.

Our lecturers have many years of experience within the marine industry and maintain connections to industry both locally and beyond. By their very nature, engineering skills are transferrable between industries and our lecturers are able to give practical insights and examples of relevant marine applications.

You will be working alongside students with similar interests and interacting with cohorts studying different aspects of the marine industry. This will enable you to become familiar with multiple aspects of the marine industry, leading to a valuable depth of knowledge well beyond, but closely linked to, your own particular area of growing expertise.
